# SECURITY AWARENESS TRAINING TIPS

- 1. Be mindful of public wi-fi, not all are safe.**
- 2. Get educated so you don't get tricked into providing your credentials, clicking on a malicious link, or executing a malicious file from a phishing email.**
- 3. Be aware of personal information you share online. These details can provide hackers with your location, answers to security questions, and ammunition used to craft phishing attacks. Think before you share!**
